

Title: How to develop Self Join feature(example: 02)?

#01

```
MariaDB [dbspr]> select * from esitbl
-> where sal in (select sal from esitbl group by sal having count(sal)>1);
```

```
+-----+-----+
| eid  | sal      |
+-----+-----+
| 1001 | 100000.00 |
| 1003 | 100000.00 |
| 1005 | 100000.00 |
+-----+-----+
3 rows in set (0.002 sec)
```

#02

```
MariaDB [dbspr]> select * from esitbl
-> where sal in (select sal from esitbl group by sal having count(sal)=1);
```

```
+-----+-----+
| eid  | sal      |
+-----+-----+
| 1002 | 200000.00 |
| 1004 | 300000.00 |
+-----+-----+
2 rows in set (0.001 sec)
```
