Title: How to develop Self Join feature (way: 02)?

#01
MariaDB [dbspr]> select * from epttbl
    -> order by sfid, stid;
+------+------+-------+
| sfid | stid | teach |
+------+------+-------+
11	44	java
11	99	c
33	11	html
33	77	c++
55	22	java
55	33	css
77	55	c
77	55	js
99	33	c++
+------+------+-------+
9 rows in set (0.001 sec)

#02
MariaDB [dbspr]> select sfid, stid, teach
    -> from epttbl
    -> where stid in (select sfid from epttbl)
    -> order by stid, sfid;
+------+------+-------+
| sfid | stid | teach |
+------+------+-------+
33	11	html
55	33	css
99	33	c++
77	55	c
77	55	js
33	77	c++
11	99	c
+------+------+-------+
7 rows in set (0.001 sec)

#03
MariaDB [dbspr]> select sfid, stid, teach
    -> from epttbl
    -> where stid not in (select sfid from epttbl)
    -> order by stid, sfid;
+------+------+-------+
| sfid | stid | teach |
+------+------+-------+
| 55 | 22 | java |
| 11 | 44 | java |
+------+------+-------+
2 rows in set (0.001 sec)
